

Digital Audio/Video leased lines.

1 Pricing principles

The length of the circuit, the length of time provided and the grade of service are decisive for the calculation of prices.

The local network areas and local exchange areas correspond to the network areas for the telephone service of Deutsche Telekom AG.

The local network area is the geographical area of the telephone network in which telephone calls can be made without dialing an area code (exception: Ludwigshafen am Rhein and Mannheim are two separate local network areas). The local exchange area is the geographical area of the telephone network for which a network node, to which telephone lines are connected, is responsible.

2 Types of rates

2.1 Digital audio leased lines

2.1.1 Local zone 1

Digital audio leased lines whose ends are in the same local exchange area of a local network area are in local zone 1.

2.1.2 Local zone 2

Digital audio leased lines whose ends are in different local exchange areas of a local network area are in local zone 2.

For digital audio leased lines in local zone 2, the chargeable length of the connection is the distance between the ends of the leased line.

2.1.3 Long distance zone

Digital audio leased lines whose ends are in different local network areas are in the long-distance zone.

For leased lines in the long distance zone, the chargeable length of the connection is the distance between the distance measuring points of the local network areas where the ends of the leased line are located.

2.2 Digital video leased lines

2.2.1 Local zone

Digital video leased lines whose ends are in the same local exchange area of a local network area are in local zone

2.2.2 Long distance zone

Digital video leased lines whose ends are in different local network areas are in the long-distance zone.

For digital video leased lines in the long distance zone, the chargeable length of the connection is the distance between the distance measuring points of the local network areas where the ends of the digital video leased line are located.

3 Rounding off provision

For digital audio or video leased lines in local zone 2 and in the long distance zone, fractions of 100 meters up to and including 50 meters shall be rounded down, fractions over 50 meters shall be rounded up. The chargeable length for digital leased lines in local zone 2 shall be a minimum of 100 meters; that for digital leased lines in the long distance zone at least 1.000 meters.

4 Shared use

If desired, lines to transmission facilities may also be used by several customers on a time-share basis. The provisions in Items 1 through 3 and 5 through 8 shall apply accordingly. The prices for shared use shall be charged to the individual customers participating in the time-share use according to the ratio of transmission periods as specified by the provisions of regional state law.

5 Prices with value-added tax

The prices shown with value-added tax (VAT) have been rounded up to whole cents. The prices without VAT are decisive for the settlement of accounts for the services provided. These are added together by MEDIA BROADCAST Ltd (hereinafter referred to as MEDIA BROADCAST) for billing purposes and serve as the basis for calculating the value-added tax. Thus, the amount payable by the customer may be lower than the sum of the prices including VAT.

The prices with VAT are calculated on the basis of the prices without VAT plus the statutory VAT at the time. If the value-added tax rate changes, the prices with VAT shall be adjusted accordingly.
